Q: ReactJS: Export default component from file I have this component: class Child extends React.Component { render() { return Child; } } export default Child; I can import it like this: import Child from '../components/Child'; But I would like to export it from a separate file. I've tried this: export default Child; and this: import Child from '../components/Child'; The above code isn't compiling. In Node.js with ES6, I could export something like this: export default Child; But I'm using Typescript, which doesn't seem to have an equivalent syntax. What am I doing wrong? How should I be exporting the component from a file? I'd prefer to just export it from a file if I can, but if I have to use this syntax in the file, so be it. A: You don't need to use the import statement, your export default should go in the default exports of the file you want to export it from. Take a look at Or just use a require statement like import Child from './components/Child'; but if you're doing that I'd recommend that you import all the necessary components and just export them. You can also export classes, functions and variables. export { ClassName, FunctionName, VariableName }; When using an import statement be sure that the file you're importing from is already imported into your file. MOSCOW, July 18. /TASS/. Russian President Vladimir Putin has said he will keep supporting Syrian President Bashar al-Assad. Markup Assist in AutoCAD 2019 introduced built-in markup that makes it easy to create and apply standard typographic and mathematical symbols from word processors, apps and other tools. With the Markup Assist in AutoCAD 2023, you can quickly import symbols from the default symbol set into your drawing, or import symbols from an external text file or symbol file and add them directly to the drawing. Markup Assist works on all drawings, regardless of the type of markup, whether it is in a text box, object, spline, or other shape. It is also available through the DesignCenter. (video: 1:43 min.) Additionally, you can associate text in AutoCAD Drawings with the symbols you import. For more information on importing symbols, check out our previous blog post on AutoCAD 2019's Markup Assist. Markup Import You can import symbols directly from symbol sets, external text files, or a symbol file. - Markup Import from Symbol Sets You can import symbols from a symbol set, which can include symbol sets from other products, such as AutoCAD or AutoCAD LT, and can even be text files. To import symbols, select Markup Assist from the Insert menu and select Import From Symbol Set to open the Import Symbol Set dialog box. The Import Symbol Set dialog box includes the following options: Symbol Sets : Select the symbol set or symbol file that you want to import symbols from. Text : You can import symbols that have been associated with text. Text : You can import symbols that have not been associated with text. Text Variables : You can import symbols that have variables. Text Variables : You can import symbols that have not been associated with text variables. Symbol File : You can import symbols from a symbol file. There are also options to export symbols from a symbol set and the symbols that have been imported, but they are no longer available in the tool in the current release. - Markup Import from Text Files You can also import symbols from a text file. You can use a text editor such as Notepad or Wordpad to open a text file. You can even use a text
