In contrast to the paraneoplastic forms of von Recklinghausen's neurofibromatosis, which frequently appear during the course of neoplastic disorders, generalized forms are characterized by extensive, diffuse neurofibromas, and those with multiple plexiform neurofibromas are most frequently found in von Recklinghausen's disease. We report here the results of 11 patients with von Recklinghausen's neurofibromatosis with polyneuropathies and multiple plexiform neurofibromas treated with hexa-phosphate. In only one patient was there any evidence of neurological improvement after three years of treatment, and in three more, there was only a slight reduction in the frequency of painful symptoms. In nine patients there was no improvement. The treatment was discontinued in the remaining three because of ineffectiveness or because of a marked reduction in patient compliance.Nächster Weltmeister ist der deutsche Fußball-Rekordmeister: Der Hamburger SV hat gewonnen, der HSV-Bergabfall, mehr als 200 000 Zuschauer und der unermüdliche Bittschauer sind der erfolgreichste Klub der Welt.
